INTRODUCTION.

SEVERAL of the Subscribers to my 'Birds of Europe' have urged me to publish a List of the Birds of the Western Palæarctic Region, as a check-list for labelling, and for reference in making exchanges of birds and eggs; and as no such list already existed, I hope that the present one may prove useful.

I have, as will be seen, followed Professor Huxley's classification, which appears to me to be the best that has yet been elaborated, which classification I have adopted in the 'Birds of Europe;' and in order to facilitate reference, the species are numbered consecutively, as has been done in that work.

A few alterations in the nomenclature, which further research has proved to be necessary, have been made.
